

KorInsight

KorInsight is a web-based tool that streamlines the process of investigating damages to underground assets. Regulatory agencies that collect and manage these cases can conduct the entire investigative process, from automated generation of a case via a One Call center through creation of a violation letter, from one centralized location.

This customizable system provides 100% transparency and efficiency in complying with state regulations. It also tracks historical performance, letting you identify stakeholder trends.

KorInsight can be tailored to fit your regulatory requirements. We welcome the opportunity to work with your agency to automate your investigative process, increasing your efficiency and giving you more time to focus on your investigations instead of the paperwork.

**Contact KorTerra to learn more
about how KorInsight can help your agency capture accurate
documentation while maximizing efficiency.**
